Step 6.A-Progress Report_Integrations - Dry-Runs of Postgres & File system + Manifest Rebuild

Designing end-to-end test environment

This plan sets up detailed HTTPX end-to-end tests with a temporary SQLite database, isolated filesystem paths, and a stub manifest backend. I'll override FastAPI dependencies to inject test settings, database sessions, and backend, run Alembic migrations for schema setup, and carefully manage resource cleanup between tests. I'll create tests for real and dry-run promote flows verifying DB updates, file moves, and backend scheduling while ensuring each test runs in a clean isolated environment. This approach balances realism with test speed and reliability.

[MEMORY BANK: ACTIVE]

Progress:

- ✅ Service-layer tests now inject a stub manifest backend, confirming schedule calls where appropriate and eliminating reliance on logging defaults @tests/apps/api/services/test_promote_service.py#12-552.
- ✅ Added async end-to-end coverage for the promotion router using dependency overrides: stage/sample real vs. dry-run flows are exercised against a temporary SQLite DB and filesystem, with manifest backend calls observed @tests/apps/api/e2e/test_promote_end_to_end.py#1-316.

Outstanding (per prior plan):

1. Add manifest reset entry point and tests.
2. Include async E2E coverage for that reset once implemented.

Next steps:

1. Extend router/service with a reset route that drives PromoteService.reset_manifest.
2. Update schemas if needed and back with unit + E2E assertions (reuse current manifest stub).

Let me know when to proceed on the reset hook or if any adjustments are needed before then.

[MEMORY BANK: ACTIVE]

Summary:

- Added manifest reset request/response schemas with validation and exports to the shared schema module.@apps/api/app/schemas/promote.py#142-182 @apps/api/app/schemas/**init**.py#3-19
- Exposed /promote/reset-manifest in the router, wiring it through PromoteService.reset_manifest and returning correlation-aware responses.@apps/api/app/routers/promote.py#10-108
- Extended unit tests and new async E2E suite to assert manifest reset delegation and API behavior using the manifest stub backend.@tests/apps/api/services/test_promote_service.py#441-446 @tests/apps/api/e2e/test_promote_end_to_end.py#318-335

Tests: Not run (not requested).

[MEMORY BANK: ACTIVE]

Ran targeted pytest suite covering the updated service and e2e tests:

pytest tests/apps/api/services/test_promote_service.py tests/apps/api/e2e/test_promote_end_to_end.py

All 16 tests passed (16 passed in 5.29s).

Step 6 is complete.
